## SUMMARY

Detail-oriented and highly driven **Computer Science and Engineering undergraduate** with hands-on experience in building scalable end-to-end Machine Learning systems and responsive Full-Stack web applications. Proven core competency in predictive modeling, data pipeline engineering, and technical problem-solving. A collaborative community leader with a tracking record of organizing tech events, running workshops, and bridging the gap between industry tools and technical peer learning.

## EXPERIENCE

### GeeksforGeeks

July 2026 – Present

#### Campus Mantri (Ambassador)

Prayagraj, UP

- Serving as the primary brand representative and community liaison to champion a robust coding culture on campus.
- Spearheading competitive programming contests and technical workshops, expanding student engagement with GeeksforGeeks resources.
- Coordinating with cross-functional student teams to design, market, and execute technical peer-learning initiatives.

### United College of Engineering and Research

Dec. 2024 – Present

#### Core Team Member

Prayagraj, UP

- Collaborating on the end-to-end planning, technical logistics, and operations for university-level hackathons and tech fests.
- Facilitating development round-tables and peer-to-peer coding bootcamps to assist underclassmen with core computing concepts.

### Innovation and Incubation Hub MNNIT Foundation

May 2026 – June 2026

#### Research Intern (AI/ML)

Prayagraj, UP

- Architected data preprocessing pipelines utilizing Scikit-learn to handle outlier capping, scaling, and categorical encoding.
- Conducted exploratory data analysis (EDA) and trained baseline machine learning models during the AIML Summer Internship framework.
- Collaborated closely with research mentors to evaluate classification metrics and mitigate dataset class imbalances.

## PROJECTS

### Employee Attrition Prediction System | *Python, Scikit-learn, XGBoost, Streamlit*

May 2026 – June 2026

- Built an end-to-end Machine Learning solution to detect employee turnover risks utilizing the IBM HR Analytics dataset.
- Engineered a robust preprocessing pipeline using Scikit-learn's ColumnTransformer, incorporating IQR outlier capping, Z-score scaling, and One-Hot Encoding.
- Tackled heavy class imbalance with SMOTE to ensure unbiased evaluation across multiple models (Logistic Regression, Random Forest, XGBoost).
- Achieved a peak overall accuracy of 87.76% with XGBoost, while maximizing the recall trade-off (88.9%) to flag high-risk departures accurately.
- Deployed the system via an interactive Streamlit web dashboard for seamless HR executive oversight.

### CPU Scheduling Visualizer | *React.js, JavaScript, HTML5, CSS3, Vercel*

Mar. 2025 – May 2025

- Developed an interactive web simulator to visualize and benchmark classic CPU scheduling algorithms (FCFS, SJF, SRTF, Priority Scheduling, and Round Robin).

- Rendered process execution paths dynamically through Gantt charts, auto-calculating key metrics including Waiting Time, Turnaround Time, and Response Time.
- Implemented dynamic inputs supporting configurable arrival, burst times, and quantum intervals within a highly responsive UI layout.
